Department of Management Information System

Features

With the aim of cultivating a passion for science, humanities, knowledge and the international perspective of high quality IT talent, as well as focusing on information management and information technology, we place emphasis on both business management and information technology, preparing a new generation of talents for technology and management. Taking advices from within and outside the industry, we continuously adjust our curriculum based on the needs of our social evolvement and related industries. The department also focuses on a 3-in-1 teaching model including theory teaching, project implementation and practical training in accordance with the industry's needs.

Vision

1. Advanced Education
After graduation, our students may pursue advanced education in domestic or international graduate schools related to information or management.
2. Employment
In addition to pursuing further education, students may also choose to work in the field such as organizational network management, programming, data base management, system analysis and design, ERP, computer audition, information security, computer animation, information system integration engineering, mobile APP and cloud engineering etc.

Our school is situated at the NeiHu Technology Park and is close to the Nangang Software Park. There are job opportunities for engineers and people with management skills. Our department cooperates with companies in NeiHu and Nangang Park in order to create opportunities for practical training and cooperation projects.

Department of Information Technology

Features

The mission of our department is to help, train and turn our students into the core technological talents in information technology related industries. Therefore, our curriculum design is based on two courses, "software engineering" and "intellectual system", which are supplemented by the study of theories and the practice of "system integration" in order to turn our students into IT specialists possessing both the knowledge of software engineering and intellectual system.

Vision

The economy of a country lies in the development of technology which relies on the professional specialization, and the achievement of professional specialization lies in the cultivation of talents. Our department will seek academic cooperation opportunities with other universities and research institutions. Students may choose to work in the information technology industry, apply for jobs related to information technology, or pursue further academic education and devote themselves to the academic world.

Department of Multimedia Design

Features

The speed of technology evolvement in the 21st century is so fast that it has also triggered the emergence of the digital industry. Under the influence of digitalization, the main focus of our talent cultivation lies in infusing students with the concepts of arts, humanities and professional digital multimedia knowledge. In our curriculum planning, in addition to the basic design theories of traditional aesthetics, courses such as animation, multimedia integration and the editing and production of digital video are also what we

emphasize. In order to turn our students into great design specialists for the related industries and to make what they have learned helpful in their career planning, intensive skill training is added into our curriculum planning.

Vision

- Providing study opportunities for people who want to learn more about digital multimedia and technological designs.
- Cooperating with academic and professional institutions and encouraging students to participate in design contests.
- Conducting projects with corporations.
- Recruiting professionals with academic and practical experience.
- Updating teaching and research facilities.
- Advanced education and employment.
- Advanced Education: After graduation, students can further pursue their advanced education in academic field or continue to pursue their master degrees at graduate schools.

Employment: After graduation, students could choose either to pursue advanced education or work in digital multimedia related industries, including animation, digital imaging, digital publishing, digital learning and digital games, which are the five major industries for multimedia. The booming of home economy, popularity of open mobile platforms and the skyrocketing growth of digital material demands are all the factors that speed up the development of digital industries.

Department of Public Finance and Taxation

Features

The department aims to cultivate the students' professional knowledge of "Tax Management", "Finance Application" and "Legal Ethics".

License courses

Counseling students to achieve tax and accounting classes, financial classes and financial certificates, such as: billing disabilities, tax reporting practices, SME finance staff, ERP, BI, financial planners, trust business, securities salesperson, life insurance salesman, and other professional licenses.

Vision

Further Studies: Finance Graduate School, Business Graduate School, Economy Graduate School, Business Administration Graduate School, Finance and Banking Graduate School.

Employment

1. Passing the bookkeeper examination and becoming a book-keeper.
2. Passing the accountant examination and become an accountant.
3. Passing finance and taxation public official examinations and work as a public official.
4. Working as a finance or taxation staff in a private organization.
5. Working in finance or banking institutions and providing financial services.
6. Assisting in job seeking through our employment program.
7. Job opportunities released by companies offer their practical training including taxation information companies, CPA firms, finance consulting companies, finance and banking companies, information companies, etc. TMUST is located nearby NeiHu Science Park; therefore, many job opportunities could be available to our students.

Bachelor Program of Real Estate Investment and Management

Features

The department cultivates knowledge and ability of real estate resource development, real estate business, as well as the integrity and service attitude of professionals.

License courses

Students are trained to achieve professional licenses for land registration agents, realtors, real estate appraisers, real estate brokers, and to take part in property tax reporting practices.

Vision

In addition to furthering their studies, our students may choose to work in the government officials related field, land registration agents, assistant real estate brokers, real estate brokers, real estate appraisers, land tax agents, credit department appraisers, real estate fund managers, or trust and investment company analysts.

Department of Accounting Information

Features

The department focuses on nurturing accounting professionals with workplace ethics. The curriculum is designed to train students' financial accounting expertise and application capability, cost and management accounting expertise and analytical ability, the ability to audit control application expertise, international financial knowledge and ability, business administration and IT logical reasoning ability, tax expertise and application capabilities, literacy professional ethics, workplace ethics, humanities, multiple learning ability, and other basic literacy and core competencies.

Vision

To accommodate the changing business environment and to cultivate an accounting professional, the mission of our department is to cultivate a professional with accounting information knowledge and work ethics. To achieve this mission, our curriculum focuses on both theoretical and practical training. We help students obtain accounting related licenses and develop all-rounded accounting skills. Our department also facilitates resource-sharing between schools and departments. We aim to train students with information integration skills.

Department of Banking and Finance

Features

The objective of the department is to help students cultivate talents specializing in all aspects of finance. Our curriculum is designed with theories and practice, both of which are equally valued. We also set up a license application supporting program to help our students obtain as many licenses as possible. We cooperate with

organizations to provide practical training opportunities for students.

Financial Planning and Tax Management Master Program

It is the first graduate school in Taiwan which is set up according to customers' viewpoint of financial planning. The purpose of its establishment is to provide professional knowledge about income and tax management, so that our students are trained to be professional financial managers or tax managers. The objective of our program is to cultivate students with talents specializing in financial planning and tax related issues, so that they will guide the financial planning industry towards a sounder development direction.

Vision

- Opportunities after Graduation
- Securities finance: working in the securities, banks or insurance companies.
- Corporations: working as financial management personnel, accounting personnel, and administration personnel.
- Becoming public officials.

Department of Insurance & Financial Management - Risk Management & Insurance Division

Features

Our curriculum design focuses on risk management with more emphasis on insurance and finance. Two professional programs are offered by the department, including "risk management and insurance program" and "financial management program". The former focuses on financial insurance, placing more emphasis on risk management and insurance. The latter focuses on financial management and investment planning. Our department also helps students obtain professional certificates and develop practical experience in order to increase their job competitiveness.

Vision

1. Studies: students may further their studies in the field of insurance or risk management.
2. Employment: insurance practitioners, insurance brokers, insurance agents, insurance notaries, reinsurance and life insurance personnel management and enterprise risk management departments.

Department of Applied Foreign Languages

Features

Our aim is to cultivate an applied foreign language professional with practicability, humanity, global vision and work ethic. The courses offered in our department focus on English and Japanese. Our objectives are to train and upgrade students' four basic language skills (listening, speaking, reading and writing) and translation skills so as to prepare them for the General English Proficiency Test and other related standard tests as well as for their further studies and career plans. In order to realize the objectives mentioned above, our curriculum design focuses on the integration between language and industry related courses in the hope not only to improve students' foreign language proficiency but also to equip them with sufficient communication skills applicable in workplace.

Vision

- Caring for students' mentality.
- Developing students' basic and professional skills.
- Building the information application skills.
- Preparing the students for further studies and work.
- Improving teachers' teaching profession.
- Focusing on academic research.
- Cooperating with corporations.
- Encouraging workplace training.

Department of Logistics Management (Master Program)

Features

We aim at cultivating talents with integrated knowledge and skills of trade and logistics, independent thinking and problem-solving abilities. We expect our students to integrate theoretical knowledge with practical training so as to provide helpful information to efficiently facilitate top management's decision-making. With the theoretical knowledge and practical training received, we believe our students could be of help to any organizations right after their graduation.

Vision

- Further Studies: students can further their studies in doctoral programs concerning logistics related fields.
- Employment:
 - Jobs in Private Organizations: Our students can apply for jobs in the international section of a trading or distribution company as a salesman or work as a trading clerk, bonded goods clerk, logistics planner, industrial engineer in the factory or logistics department in the technology industry, buyer, warehouse keeper, team leader in the manufacture section or stock keeper.
 - Public Positions: If our students pass the civil service examinations, they may work as industrial engineering technicians, or work in Institute for Information Industry, CPC, Bureau of Foreign Trade, Council for Economic Planning and Development, Customs, etc.

Department of Banking and Finance, and Graduate Institute of Financial Planning and Taxation Management

Features

We are the first graduate school that design our curriculum based on the six examination programs of the Certified Financial Planner (CFP). The coverage of the courses is as follows: fundamental financial planning, risk management and insurance planning, employee welfare and retirement pension planning, investment planning, transfer planning of land tax, other levies and property, and full-aspect financial planning. The fields under our research coverage include the professional issues faced by individual financial management such as investment planning, risk management, tax management, customer relationship management, etc.

Vision

After graduation, our student can work as full-aspect financial consultants or take jobs in the field of financial planning or wealth management in financial organizations by providing financial products such as banking, securities, futures and investment trust consulting services.

Department of Logistics Management

Features

The education objective of our department is to cultivate students' business managerial talents with capabilities that are needed by our national industrial developments. We also facilitate industrial cooperation with logistic service enterprises in Neihu Technology Park through providing part-time job opportunities to our students.

- Teaching quality guarantees: We have established a continuous teaching quality improvement system.
- Emphasizing on industrial cooperation: We have established a Global Logistic Industrial Cooperation Center and Chain Store Development Center.
- Helping students obtaining professional certificates, such as Beginner Logistics Management and SOLE-CPL.

Vision

After graduation, students may pursue careers in logistics, e-commerce, service industry, manufacturing industry, franchise enterprises, retailing, circulation industry, storage management, and wholesaling.

Program of Chain Stores Management

Features

This program focuses on cultivating students with practical chain store management knowledge. The objective of the department is to meet the trend of economy development, to increase the overall value of the headquarter, to cultivate talents needed in the work force so as to enhance the competitiveness of our domestic chains and franchising industries, and to set up a platform where cooperation between industries and academic organizations could be achieved, so that we will have sufficient talents who can exert their capabilities in the chains and franchising industries in China and overseas.

Vision

After graduation, students may work in departments such as marketing, production, HR, accounting, planning, or in business management departments in any organization and be responsible for administration, planning or management-related jobs. Meanwhile, they can also choose to take national Civil Service Examination for working in governmental departments. Other than working, students can also pursue their advanced education in graduate schools in Taiwan or overseas and become teachers or researchers in the future. We expect our students to be able to obtain a job right after graduation.

Department of Business Administration

Features

Our aim is to cultivate students' analytical and communication skills and the good integration of enterprise management personnel.

Vision

- Studies: Students may further their studies in fields such as business management, industrial management, information management, finance, technology management, human resource management, management science, and marketing and research institutes.
- Employment: Students may take a public examination to enter the state-owned enterprises and government agencies, or office marketing, production, human resource management, accounting, planning and operational management of other departments in the relevant administrative, planning and management.

Department of International Trade

Features

The department focuses on not only international trade theories and knowledge but also practical skills. We put emphasis on students' practical operation and we proactively coach students in their license examinations so as to help them obtain as many licenses as possible. We hold simulated product exhibition contests (mainly export products) on campus and encourage students to participate in similar national contests. We also provide students with short-term employment programs and long-term practical training opportunities, so that they can realize the practical operation of real workplace before their graduation.

Vision

- Further Studies: Our students may pursue their advanced education in international trade or international business-related graduate institutes in Taiwan or overseas. We have also established "Graduate Institute of Global Trade and Logistics" and "Graduate Institute of Business Management in Service Industry" in 2008 for our students to pursue their further education.
- Employment: After graduation, our students may take civil service examinations to work in governmental institutions or to work in private enterprises as a secretary, salesman, bank clerk, foreign exchange clerk, trade-handling clerk or a customs officer.

How to get to Takming University of Science and Technology:

1. By bus

- Taipei Station: Taking bus 247 or 287 to Xihu (Takming University) MRT Station
- Dazhi: Taking bus 21, 28, 222, 247, 256, 267, 286, 287, 902 or bus Red2 or bus Brown16 or bus blue7 to Xihu (Takming University) MRT Station
- Shilin: Taking bus620 or bus646 or bus902 to Xihu (Takming University) MRT Station
- Taichung City Hall Station: Taking bus blue7 or bus blue26 to Xihu (Takming University) MRT Station, taking blue27 to Xihu junior high school bus stop
- Taking Kuo-Kuang bus: From Keelung to Shipai to Xihu junior high school bus stop

2. By MRT:

- Wenhui Line: To Xihu (Takming University) MRT Station and go to No.1 Exit
- Bannan Line: From Zhongxiao Fuxing Station to transfer Wenhui Line to Xihu (Takming University)
